

Town of Wanatah

Lead Service Line Inventory Declaration

The Town of Wanatah Water Utility in compliance with federal regulation 40CFR 141.84 have completed a customer water service line inventory. The purpose of the inventory is to identify the various customer service line materials connected to the Public Water Distribution System. The completed inventory was essential to help identify any lead service lines or lead contaminated galvanized piping that would require future replacement.

The Water Utility reviewed all sources of information pertaining to the Wanatah Water System including original construction specs and documents, maps, permits, meter installation information, service line inspection reports, and additional data to identify any lead or lead contaminated piping.

After reviewing the completed service line inventory, the Wanatah Water Utility has determined that the water distribution system has no customer lead service lines or lead contaminated galvanized piping requiring future replacement.

Please contact Wanatah Town Hall with any questions 219-733-2340.
